SUPPLEMENTAL INFORMATION DISCLOSURE STATEMENT
UNDER 37 CFR § 1.97

Commissioner for Patents
PO Box 1450
Arlington, Virginia 22313-1450

Sir:

Please find, pursuant to 37 CFR § 1.98(a)(1), the enclosed Form PTO-1449 which contains a list of all patents, publications, or other items that have come to the attention of one or more of the individuals designated in 37 CFR § 1.56(c). While no representation is made that these references may be "prior art" within the meaning of that term under 35 USC § 102 or 103, the enclosed listed references are disclosed so as to fully comply with the duty of disclosure set forth in 37 CFR § 1.56.

Moreover, while no representation is made that a specific search of office files or patent office records has been conducted or that no better art exists, the undersigned attorney of record believes that the enclosed art is the closest to the claimed invention (taken in its entirety) of which the undersigned is presently aware, and no art which is closer to the claimed invention (taken in its entirety) has been knowingly withheld.

In accordance with 37 CFR § 1.97 and 1.98, a copy of each of the listed references or relevant portion thereof is also enclosed.

Statement of Relevance of References Listed
Unaccompanied by English Translation
Under 37 CFR § 1.98(a)(3)

In accordance with 37 CFR § 1.98(a)(3), the following concise explanation of the relevance of each listed reference that is not in the English language and unaccompanied by a translation into English is provided.

Swiss Patent No. 399 786 appears to provide the same disclosure as U.S. Patent No. 2,952,080.

PCT Publication No. WO 99-49420: The invention relates to a method for preventing the falsification of documents comprising a photograph, especially a facial-view photograph. The invention is characterized in that the photograph is converted into a digital image file or is present in the form of a digital image file into which a secret image present in binary form is introduced in such a way that the digital image file of the image is divided into "parquet cells" whose number is equal to the number of picture elements of the secret image. The invention is further characterized in that a parameter function is created which assigns a bivalent result value to each parquet cell on the basis of parameter values which describe each picture element. The bivalent result values of all parquet cells form a bivalent position matrix. By means of an optimization method the parameter values of the picture elements of the individual parquet cells are modified in such a way that on the one hand the changes made to the digital image file of the photograph of the document do not result in any visually perceptible changes and on the other hand the result of the application of the parameter function on the individual parquet cells leads to the formation of a bivalent position matrix which corresponds to the binary values of the secret image. The photograph containing the information of the secret image is affixed to the document or printed out together with said document.
